

Question...

- Do you have computer problems that need attention today?
- Do you have network issues that are driving you crazy?
- Is your email down?
- Does your server or workstations keep freezing or crashing?
- Do you have nagging technical issues that need to be taken care of professionally?

10 Warning Signs of Computer or Server Trouble

Computer and server problems come in all shapes and sizes. The cause may be software or hardware-related, and often a combination of both. Either way, when a computer or server at your company is on the blink, your business suffers from lost sales, unproductive employees, and missed opportunities. At Woodbridge Data LLC, we specialize in computer and server repair. We are well aware of the problems you may encounter and how to fix them.

Here's a quick look at some of the most common issues you're likely to face with your computers and servers that aren't functioning as they should. We'll also share the most important steps you can take to improve the overall health of your technology infrastructure.

Know the Signs and Symptoms of an Ailing Computer or Server:

- Your computer/server is slow, freezes or crashes (these are the most obvious ones)
- You aren't able to do something you were able to do before
- You are noticing an unusual amount of pop-up windows
- You have created work-a-rounds for something that's not working right
- You don't know the status of your current backup situation
- You don't have current Microsoft security-related updates
- You don't have current virus definitions
- You aren't sure if you have a firewall in place
- Printing is inconsistent
- Sending or receiving emails is inconsistent

All of these issues can be easily resolved by our professional staff on an hourly basis or a monthly contractual basis, depending on your business needs and your budget. Call us at (732) 669-0601 today!
