

Information and Technology Outsourcing and Consulting

Woodbridge Data LLC is a seamless extension of the client's IT organization, and in some cases **is** the client's IT organization.. This begins with a complete understanding of the Company's information technology situation, objectives and constraints. Woodbridge Data LLC performs project management, infrastructure support, requirements analysis, needs assessments, audits and IT strategic planning. The cornerstone to the Woodbridge Data's best practices methodology is knowledge transfer to the client as the last and crucial component of the assignment completion.

Project Staffing and Contract IT Services

Woodbridge Data's project staffing methodologies "rise above" traditional contract IT services. This methodology encompasses "FIT® Analysis," knowledge transfer, delivery to milestones and in-house technical expertise as a value added service to both clients and Woodbridge Data Consultants. Our Consulting Services Managers provide value added services to our clients by demonstrated ability to interface with client executives, and provide objective observations related to project staffing issues.

Woodbridge Data provides information technology consultants on both short term and long term assignments, as a value based partner. Our Consultants are professional, technically proficient, and deadline oriented to meet the rising project needs of our clients. This alleviates undue stress of the client's current employees. All Woodbridge Data consultants have access to our technical network. If a technical issue arises, we are proactive in solving that issue through our structured processes - *as a team*.
